

ABSTRACT

To provide a display device, an electronic apparatus, and a method of manufacturing the display device, which are capable of preventing growth in size of a production line and the resultant increase in cost without deteriorating display quality, by using an elongate or contractile ~~substrate~~. ~~There~~ substrate, there is provided a display ~~device~~ 10 device in which an element ~~layer~~ 20 layer having ~~electrodes~~ 51 electrodes and a photo-functional ~~layer~~ 510 layer is formed on a ~~substrate~~ 501, substrate, the ~~substrate~~ 501 substrate is made of an irreversible elongate material, and the element ~~layer~~ 20 layer is made of an elastic material and ~~has~~ provides an adhesive property to the ~~substrate~~ 501 substrate.
